ABOUT ME

Full-stack engineer and PdM with 10+ years of experience building products from zero in startups. I take ownership across the entire product lifecycle — customer discovery, architecture, implementation, and post-launch support — while keeping business impact as the primary compass for prioritization.

I have hands-on experience shipping Generative AI-powered products (ad creative generation, vector search, simulation tools) and have led Claude Code adoption initiatives for non-engineer teams. I thrive in environments where I can move fast without sacrificing the foundational decisions that matter at scale.

EXPERIENCE

PLAID, Inc. / PdM · Engineer
DEC 2025 – PRESENT, TOKYO

Transitioned to PLAID, Inc. following the acquisition of agito, Inc., continuing to drive the same product as a dual PdM and Engineer.

- Led the PoC for same-day ad data acquisition, upgrading data freshness from T-1 (previous day) to a same-day basis in collaboration with PMM and a key client — unlocking a capability that had been a standing customer request.
- Spearheaded AI enablement across the organization by designing and facilitating Claude (Cowork) study sessions for non-engineer ad operations teams, driving practical GenAI adoption in daily workflows.
- Delivered a full data solution for a major retail client: designed BigQuery data marts from raw query analysis through to a production Looker Studio dashboard used for executive decision-making.

agito, Inc. / Tech Lead · PdM
SEPT 2018 – NOV 2025, TOKYO
(Joined the PLAID Group in OCT 2022)

— 2024/10 – 2025/11 / Solo Engineer · PdM —

Built and shipped an entirely new product line as a one-person team, owning customer discovery, planning, engineering, and support end to end.

- Developed an AI-driven creative generation tool that automatically produces ad banners and copy from landing page content using Vertex AI Generative AI models, significantly reducing creative production time for ad operations teams.
- Built an ad campaign search engine using vector search on BigQuery and Vertex AI, enabling flexible semantic queries that were not possible with the existing keyword-based system.
- Engineered an ad performance simulation tool that leverages historical campaign data to forecast results for new proposals, directly improving sales team hit rate and proposal credibility.
Stack: TypeScript, Cloud Run, PubSub, Memorystore, BigQuery, Vertex AI (Vector Search)

— 2023/01 – 2024/09 / Tech Lead · PdM —

Led a cross-functional team of 8–10 engineers as the bridge between business and engineering, while driving core system modernization and product strategy.

- As Tech Lead, spearheaded the migration to a serverless architecture (Cloud Run), enabling same-day ad data retrieval as a key business differentiator over competitors still relying on batch pipelines.
- As PdM, defined and managed the product roadmap with CEO and PMM, translating business priorities into development execution and keeping the team focused on the highest-impact work.
- Reduced onboarding friction for enterprise clients by acting as the technical representative in complex integration sessions, bridging the gap between client engineering teams and internal product requirements.
- Simplified reporting for customers by integrating Looker Studio via the Linking API, enabling instant one-click report generation and cutting onboarding time.
- Delivered rapid beta integrations (GA4, AppsFlyer, Adjust) using Google Apps Script to validate market demand with minimal engineering resources.

— 2018/09 – 2022/12 —

Joined as a founding engineer and built the core ad reporting platform from scratch alongside the CTO, growing the product from an early-stage prototype to a large-scale data pipeline.

- Scaled connected ad accounts from 3,000 to 20,000 by solving product scalability bottlenecks, with ad report acquisition reaching approximately 200,000/day.

- Migrated the existing GAE monolith to a serverless, event-driven architecture (Cloud Run + PubSub), improving scalability and reducing infrastructure overhead.
- Led a team of 3–5 engineers: conducted code reviews, managed task allocation, and acted as the engineering representative in business-side communication.
- Built a prototype to automatically classify industry categories from ad text using NLP techniques.
- Developed a data mart generation application to link ad data with client-side customer data.
- Built applications for SQL generation (BI tools) and Excel report generation.
- Developed the core web application as a full-stack developer.
Stack: Go, PubSub, Cloud Run, GAE, GCE, Datastore, Memorystore, Cloud Scheduler, BigQuery, JavaScript, Vue.js (Vuetify), PHP (Laravel)

ubun, Inc. / Freelance Engineer
FEB 2021 – APR 2022, TOKYO

- Developed a suite of tools for Amazon sellers as a full-stack freelance engineer, taking ownership of front-end, back-end, and batch processing independently.

TVISION Insights Inc. / Freelance Engineer
JUN 2018 – AUG 2018, TOKYO

- Built an internal web application, managing the project autonomously from planning through delivery.

Techloco, Inc. (seconded from Soldout, Inc.) / Engineer
OCT 2015 – JUL 2018, TOKYO

- Contributed to the development of an all-in-one marketing tool, brick (<https://www.brick.tools/>).
- Identified a pain point from prior design work and independently proposed, designed, and shipped a browser-based site review tool (<https://markezine.jp/article/detail/26719>) that lets users annotate and comment on web designs directly in the browser — now a core feature of the product.

Soldout, Inc. / Marketing Division
APR 2014 – SEP 2015, TOKYO

- Leveraged self-taught iOS development skills to build internal workflow automation tools using Google Apps Script, Salesforce API, and HubSpot API, improving operational efficiency across the team.

SKILLS

Programming Languages

Proficient: Go, TypeScript/JavaScript, PHP, HTML/CSS, SQL

Intermediate: Node.js

Beginner: Dart, Python, Swift

Generative AI

Claude (Cowork / Code), OpenAI API, Vertex AI (Generative models + Vector Search)

LLM prompt engineering, AI-powered product development, GenAI adoption facilitation

Infrastructure – GCP

Cloud Run, PubSub, Datastore, Memorystore, Cloud Scheduler, GAE, GCE

Cloud SQL, BigQuery, Cloud Storage, Cloud Monitoring, Cloud Logging, Cloud Build

Vertex AI, Firebase

Infrastructure – AWS

EC2, S3

CI/CD & Tools

GitHub Actions, Circle CI, Docker, Git

Languages

Japanese – Native

English – Business level (TOEIC 960)

EDUCATION

Aoyama Gakuin University / Bachelor of Business Administration (BBA)

APR 2010 – MAR 2014, TOKYO

The University of Vermont / Exchange Program (Concentration in Business)

AUG 2012 – MAY 2013, BURLINGTON, VERMONT, USA

9-month exchange program through the International Partnership & Collaboration initiative

CERTIFICATES

Udacity / Machine Learning Engineer Nanodegree 2016 – 2017

Udacity / iOS Engineer Nanodegree 2015
